
Full Version Preset Viewer Breeze Serial Rar Utorrent 32 Mac

Tracklog | Static Location | **Between Points** | Reverse Geo | One by One | Help | Etc...

Set the location proportionally, time-wise, between the these two locations:

Start: optional altitude

End: in meters

The earliest image gets the start location, the latest image gets the end location, and other images get locations in between; choose a different "How to do it..." for other options.

See the "Help" tab for a description of the kinds of inputs understood.

Currently indicated start: **nothing**
end: **nothing**

Add map url to per-image plugin metadata ([configure map url](#))
It can be viewed with the "All Plug-in Metadata" or "Geoencoding" metadata-viewer presets, and refreshed in the "Etc" tab.
You can build your own personally-tailored custom metadata-viewer presets with [this plugin](#).
